Brief for the Web Team: New “Webinars” Section

Sharif Group Marketing Team · 13 October 2026 · To go with `Sharif-Webinars-Demo.zip`

We would like to add a new **“Webinars”** section to the website at `/webinars`. It will list our free online webinars, and visitors can join a session or register for reminders. The first series is three sessions on the Dominica passport for an Afghan audience. The zip file contains a **clickable prototype** that shows how the pages should look and behave. It is not production code, so please build it on the current website platform.

How to view the prototype

Unzip the file and double-click `index.html`. No internet connection is needed. Use the **“Demo controls”** button in the bottom corner to see every state of the page. Switch between Persian, English, Arabic and Chinese from the language menu in the header.

What we need

1. **A “Webinars” item in the main menu**, next to “Blog”, and in the mobile menu and footer.
2. **A webinars list page** showing the next session with a countdown and Kabul / Dubai times, the sessions in the series, and a short “how to join” guide.
3. **A page for each session** with an introduction, key topics, the 65-minute agenda, speakers, FAQs, a joining box and a registration form.
4. **An optional registration form** with these fields: name, WhatsApp number (default +93), email (optional), country of residence, question (optional) and a newsletter checkbox (off by default). It should submit through the same route the site’s current forms use to reach the CRM. We also need an Excel export for each webinar.
5. **An admin panel similar to the Blog**, so the marketing team can add webinars, paste the meeting link and change the status without a developer.
6. **A slim banner on the homepage** and **a card at the end of related blog posts**, both linking to the next webinar.

The three states of the joining link (most important)

When	What the site shows	What we do in the admin panel
Before the link is ready	Link will be posted soon	The link field is empty, so the button cannot be clicked.
When the link is ready (shortly before the session)	Join the webinar	We paste the meeting link and the button goes live for everyone. No registration is needed.
After the session	This session has been held	We set the status to “Held”. The link, countdown and form are removed.

All of these changes must be possible from the admin panel alone, with no code changes.

Rules that must be followed

- **No recordings or archive on the website.** The sessions are in Persian and we do not want them associated with Iran. Recordings are published only on our Persian YouTube channel, and the website does not link to them.
- **The meeting platform's name (Alocom) must not appear anywhere on the website.** That includes page text, headings, page metadata and the calendar file. The raw link address must not be shown as text either; it should only sit behind the button.
- The form must not ask about assets, investment amount, passport number or Tazkira number. Phone numbers and emails must not go into page URLs or analytics tools.
- The design should stay consistent with the current website (the colours and fonts were taken from the site itself), and all four languages must be supported. The Arabic and Chinese text should be reviewed by a fluent speaker.

Timeline

The first version should be ready **10 days before the first session**, when the campaign starts. If that isn't possible, please let us know early so we can set up a temporary simple form with the same fields.

Questions for you

- Which service will send the automatic confirmation email?
- Who will have access to the admin panel and the data?

What's in the zip file

`index.html`	Clickable prototype: list page, session page, thank-you page, admin preview and site integration points
`docs/HANDOFF.md`	Technical details: admin fields, page behaviour, form, test checklist
`locales/*.json`	All text in four languages, ready to add to the site's existing language files
`data/` · `screenshots/`	Sample admin data and screenshots of the pages on desktop and mobile

Dates, speaker names and the meeting link in the prototype are placeholders and will be replaced once confirmed. The prototype does not send any data anywhere.
